2. Problem Statements & Design Principles
3. Metrics & Measurement

Innovation: Human Needs & Technology

Understanding the methodology to engage with you.

Ambassador Stories

Human centered design may be the most important part to consider in any innovation. By centering people with kidney failure as consumers, the toolkit lays out methods to generate design inputs from people's stories: the toolkit is one part of a total product that can help you understand when their product meets the needs of people with kidney failure.

Measurement of Metrics

How you can apply metrics and design principles to your personal story.
